

VIJAYAPRAKASH T

Operations Engineer

Chennai, India • +91 63818 71490 • vijayaprakashthinakaran@gmail.com

PROFESSIONAL SUMMARY

Operations Engineer with over two years at a payment technology company, spanning software development and payment operations. Combines backend development (Node.js, TypeScript, PostgreSQL) with strong SQL, automation, and deep payments domain knowledge across acquiring, settlement, reconciliation, and transaction investigation. Experienced with acquirer/processor platforms including Fiserv, Worldline, and NETS, and skilled at building automation and resolving complex payment issues end to end.

CORE SKILLS

Languages & Frameworks: JavaScript, TypeScript, Node.js, Express.js, NestJS, Python, SQL, HTML/CSS.

Databases & Tools: PostgreSQL, TypeORM, REST APIs, JWT authentication, Git, JSON, query optimization.

Payments & Domain: Card acquiring & settlement, reconciliation, transaction lifecycle, payment architecture, merchant & terminal management, POS/contactless.

Strengths: Production support, incident triage & root-cause analysis, process automation, cross-functional collaboration, clear technical communication.

PROFESSIONAL EXPERIENCE

Operations Engineer

Surfboard Payments

- Investigate and resolve payment transaction issues across acquirer and processor systems (Fiserv, Worldline, NETS), coordinating with merchants and partners to closure.
- Process and validate daily multi-currency settlement files, resolving payout and bank-file discrepancies to ensure accurate merchant payouts.
- Apply advanced SQL (PostgreSQL) across payment and settlement data to investigate transactions, reconcile records, and deliver operational insight.
- Address production issues on live payment flows, triaging errors, isolating root causes, and partnering with engineering to deliver fixes and reduce recurrence.
- Build Node.js and Python automation for recurring workflows — data processing, currency conversion, and reporting — *reducing manual effort and turnaround time.*
- Reconcile external reports against internal records to identify and resolve missing or mismatched transactions, safeguarding data integrity across the payment pipeline.
- Manage terminal and device onboarding, registration, and configuration across multiple hardware models at scale, ensuring reliable deployment for merchants.
- Enable seamless merchant and partner integrations, covering terminal activation, API credentials, application setup, and connectivity, while serving as the technical point of contact through go-live.

Software Engineer Trainee

Surfboard Payments

- Worked on the core payment architecture, gaining in-depth understanding of end-to-end system workflows and building the domain foundation for the operations role.

Software Engineer Intern

Surfboard Payments

- Built backend services with Express.js, JavaScript, PostgreSQL, and TypeORM, including an Employee Management API with field search, pagination, and role-based access control.
- Developed applications with NestJS and TypeScript, including a Note app and a reusable JWT authentication service.

EARLIER EXPERIENCE

Software Testing Intern

Chakram Private Limited, Chennai

- Executed manual and automated test cases, wrote test scenarios, and documented defects using JIRA on an e-commerce platform, improving verification workflow and release stability.

PROJECTS

Employee Management API *Express.js, JavaScript, PostgreSQL, TypeORM*

- Built a REST API with field search, pagination, and role-based access control (super admin / admin) secured with JWT, and optimized queries for responsive performance.

JWT Authentication Service *NestJS, TypeScript, JWT, bcrypt*

- Developed a reusable authentication service with access/refresh tokens and bcrypt password hashing, reducing unauthorized access and deployable across projects.

Note Application *NestJS, TypeScript*

- Built a note-taking application with full CRUD operations for creating, reading, updating, and deleting notes.

EDUCATION

B.E. Computer Science & Engineering

Easwari Engineering College | CGPA 8.6 | 2024
